RAJI

**Description** RAJI is a cell line derived from a 11-year-old male patient with Burkitt's lymphoma. The cell line was established from a biopsy of the primary tumor. The cell line is characterized by a high growth rate and a high degree of tumorigenicity. The cell line is maintained in RPMI 1640 medium supplemented with 10% fetal bovine serum (FBS) and 1% penicillin-streptomycin. The cell line is characterized by a high degree of tumorigenicity and is used for the study of Burkitt's lymphoma. The cell line is characterized by a high degree of tumorigenicity and is used for the study of Burkitt's lymphoma. The cell line is characterized by a high degree of tumorigenicity and is used for the study of Burkitt's lymphoma.

**Organism** Human

**Tissue** Maxilia

**Disease** Burkitt's lymphoma

**Synonyms** RAJI, P1-RAJI, GM04671

RAJI

**Age** 11 years

**Gender** Male

**Ethnicity** European, African

**Cell type** Lymphocytes

**Growth properties** High growth rate

RAJI

**Citation** RAJI (RAJI) Cytion 300359

**Biosafety level** 1

**NCBI\_TaxID** 9606

**CellosaurusAccession** CVCL\_0511
